

ZIPPY POP!

Homemade popsicles are the coolest! But making them in your freezer takes 5 long hours! Why wait that long? Use the amazing new **ZIPPY POP!** instead, and you'll be enjoying your favorite summer treat in less than an hour!

Making popsicles with **ZIPPY POP!** is a snap. All you do is:

1

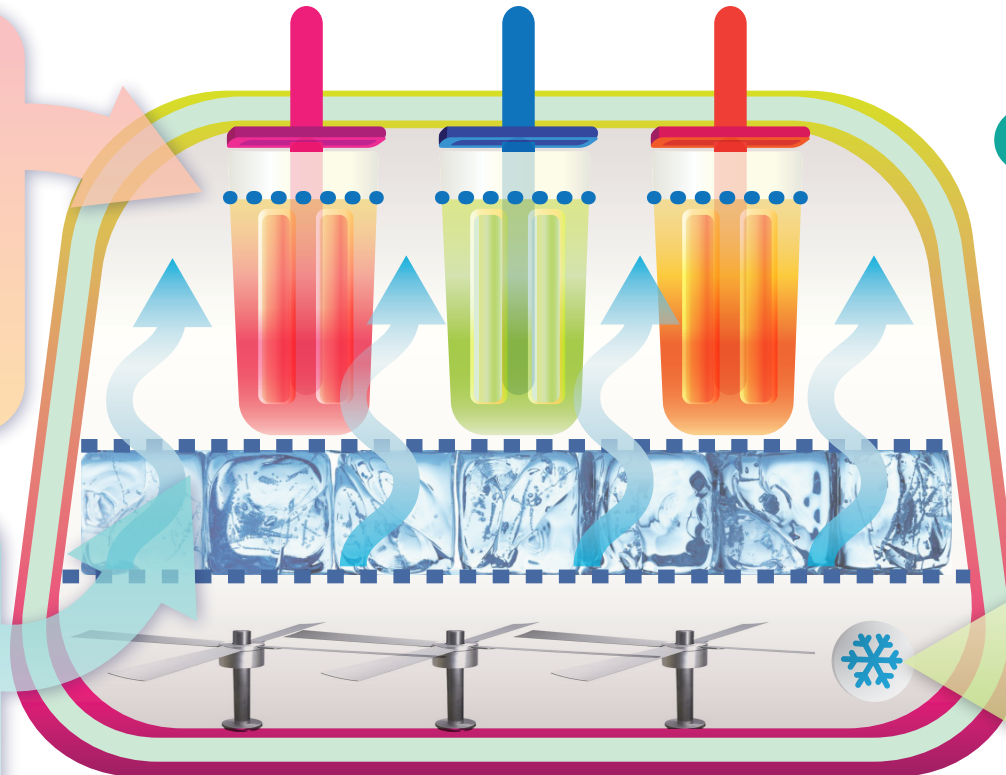

Pour your favorite mixture of juice, fruit and sugar into the molds. But don't fill them all the way to the top. Why? Because the water in the mixture expands when it freezes. Fill the molds up to the blue lines and they'll soon be full to the top with frozen, fruity deliciousness!

2

Fill the bottom with ice cubes. (Tip: They'll last longer if you make them with salty water. Salt water freezes at a lower temperature than tap water, which means that salty ice cubes melt slower than regular ones.)

3

Turn on your **ZIPPY POP!** The fans blow frigid air past the molds. Coldness flows from the icy air into the warmer popsicle mixture, causing it to freeze. It all happens zippedy quick—in just an hour, your popsicles are ready to eat!

The secret to **ZIPPY POP!**'s success is our **DOUBLE-WALL VACUUM INSULATION**. Here's how it works. The air between the two walls is sucked out. That creates a vacuum, which is a great insulator. Why? Because convection and conduction—two of the three ways heat is transferred—can't occur in a vacuum. Thanks to this amazing insulation technology, your delicious, homemade popsicles stay frozen for 10-12 hours!
